In 2013, she received the Presidential Award for Excellence in Mathematics and Science Teaching, the United States' highest honor for K-12 teachers of mathematics and science (including computer science). In 2017, she was one of just 10 teachers to be honored with the Computer Science Teaching Excellence Award. This international award is sponsored by Infosys Foundation USA; the Association for Computing Machinery, the world's leading computing society; and the Computer Science Teachers Association. Ms. Corricelli teaches AP Computer Science Principles at Conard High School, West Hartford, Connecticut, and serves as an independent consultant to the College Board for the AP Computer Science Principles Course. Be Prepared is a comprehensive test preparation book for Advanced Placement\* examination in computer science. It includes a thorough

review section that describes exam format and requirements, C++ subset used in the exams, and exam topics for both A- and AB-level exams. It also includes over fifty multiple-choice questions with complete solutions that show effective strategies and shortcuts. The second part of the book contains four complete practice exams with answers and solutions (two A and two AB exams, with no overlap). The companion web site for this book contains annotated solutions to free-response questions from past exams, review and practice questions for this year's required Case Study, and links to the College Board's materials and other resources on the web. The book is written by Maria Litvin, a veteran computer science teacher, College Board consultant, leader of workshops, and the author of a popular textbook for high school AP computer science courses. Four teachers from two leading schools with nationally-recognized computer science programs contributed questions for practice exams.

Currently used at many colleges, universities, and high schools, this hands-on introduction to computer science is ideal for people with little or no programming experience. The goal of this concise book is not just to teach you Java, but to help you think like a computer scientist. You'll learn how to program—a useful skill by itself—but you'll also discover how to use programming as a means to an end. Authors Allen Downey and Chris Mayfield start with the most basic concepts and gradually move into topics that are more complex, such as recursion and object-oriented programming. Each brief chapter covers the material for one week of a college course and includes exercises to help you practice what you've learned. Learn one concept at a time: tackle complex topics in a series of small steps with examples Understand how to formulate problems, think creatively about solutions, and write programs clearly and accurately Determine which development techniques work best for you, and practice the important skill of debugging Learn relationships among input and output, decisions and loops, classes and methods, strings and arrays Work on exercises involving word games,

graphics, puzzles, and playing cards
