The design and functioning of an information system improve to the extent that the system can handle the questions people ask. Surprisingly, however, researchers in the cognitive, computer, and information sciences have not thoroughly examined the multitude of relationships between information systems and questions -- both question asking and answering. The purpose of this book is to explicitly examine these relationships. Chapter

contributors believe that questions play a central role in the analysis, design, and use of different kinds of natural or artificial information systems such as human cognition, social interaction, communication networks, and intelligent tutoring systems. Their efforts show that data structures and representations need to be organized around the questioning mechanisms in order to achieve a quick retrieval of relevant useful information.

This book provides guidance to researchers about how to develop interview skills that align with their theoretical assumptions. Connecting "theory" and "method" can be challenging for novice researchers. Interviewing: A Guide to Theory and Practice draws from, and extends, the author's earlier 2010 book, and focuses on three interrelated issues, how researchers: theorize research interviews; examine their subject positions in relation to projects and participants; and explore the details of interview interaction to inform practice. By developing these understandings of qualitative interview practice, Kathryn Roulston shows how researchers can design and conduct quality research projects that draw on a wide range of interview practices to provide audience members and communities
