First published in 1891, Pellegrino Artusi's *La scienza in cucina e l'arte di mangiar bene* has come to be recognized as the most significant Italian cookbook of modern times. It was reprinted thirteen times and had sold more than 52,000 copies in the years before Artusi's death in 1910, with the number of recipes growing from 475 to 790. And while this figure has not changed, the book has consistently remained in print. Although Artusi was himself of the upper classes and it was doubtful he had ever touched a kitchen utensil or lit a fire under a pot, he wrote the book not for professional chefs, as was the nineteenth-century custom, but for middle-class family cooks: housewives and their domestic helpers. His tone is that of a friendly advisor – humorous and nonchalant. He indulges in witty anecdotes about many of the recipes, describing his experiences and the historical relevance of particular dishes. Artusi's masterpiece is not merely a popular cookbook; it is a landmark work in Italian culture. This English edition (first published by Marsilio Publishers in 1997) features a delightful introduction by Luigi Ballerini that traces the fascinating history of the book and explains its importance in the context of Italian history and politics. The illustrations are by the noted Italian artist Giuliano Della Casa.

In recent years, Manga has seen phenomenal success, not only in Japan, where it dominates the publishing industry, but also in the West, where it is steadily growing in popularity and influence. As swift and sudden as the popularity of this graphic art form may seem, Manga has, in fact, deep roots in Japanese culture, drawing on centuries-old artistic traditions. As early as the twelfth century, Emakimono scrolls existed, a narrative form in which stories of all kinds—romantic, fantastic, even comic—were told through the combined use of text and illustration. Japanese art continued to change as profound political, social, and economic transformations remade the country in the centuries to follow. Today there is little doubt as to the meaning of the term Manga—nor to the astonishing popularity of the form—but few in the West understand the long artistic history that gave birth to this phenomenon and the social factors that continue to shape it today. One Thousand Years of Manga is both an informative account of the genesis of the form and a visual delight. Through its captivating illustrations and enlightening text, the book situates Manga in its proper context, appreciating it for what it truly is: an integral part of Japanese art and culture that is as rich and revealing as it is popular. My First Japanese Notebook (vertical writing) is not just a notebook, it's also a useful instrument to use while learning to write Japanese characters (kanji and kana). It contains: (1) an introduction, which explains the right use of genkouyoushi (also called genkooyooshi), the special sheets Japanese use to write compositions and literary works. (2) 3 sections (around 30 sheets per section) of genkouyoushi; each section has a different squares' size and a different columns' length. These differences were designed to help students writing Japanese characters with right proportions and to allow them to get acquainted with vertical writing.

City planning is a concept which usually covers the wide range of events, processes and developments taking place in our cities, but individual plans and designs cannot do justice to the complex realities of the city. In "Induction Cities" the author aims to take the reader beyond our traditional understanding of city design to redefine our perception of design in this context. With the assistance of computers, a dynamic mechanism will be created which generates a result corresponding to the specific conditions and requirements stipulated. By this form of "meta-design" a greater degree of freedom is obtained than the conventional design methods provide. In this publication, this new theory and process is analysed, looking at the first computer-generated architecture in the world, the underground station "Iidabashi" in Tokyo. Makoto Sei Watanabe studied architecture and worked in the office of Arata Isozaki in Tokyo. In 1984 he founded his own architectural office which has realised numerous projects.
