Recent large-scale corporate collapses, such as Lehman Brothers, Enron, Worldcom, and Parmalat, highlight the implosion of traditional models of fraud prevention. By focusing on risk factors at the micro level, they have failed to take into account the broader context in which external auditors operate as well as the crucial importance of such factors as corruption, organizational culture, corporate social responsibility, ethical values, governance, ineffective regulation, and a lack of transparency. *Corporate Fraud and Corruption* engages readers by showing how evidence-based, multi-level micro and macro analysis of fraud risk and protective factors inform effective fraud prevention, in turn minimizing financial catastrophes. Krambia-Kapardis focuses on her own empirical research into the aetiology of fraud to showcase a holistic approach to fraud prevention. This book also features major case studies from the United States, the United Kingdom, and Australia.

Coma is the breakthrough novel from author and master of the medical thriller Robin Cook. It began with two patients undergoing routine 'minor surgery' in Boston's greatest hospital but Nancy Greenly, Sean Berman and a dozen others – all admitted to Boston Memorial Hospital for routine procedures – were victims of the same inexplicable, hideous tragedy on the operating table. They never regained consciousness. Up against the scorn of the medics and the hostility of the establishment, one girl medical student starts to probe the coma cases, steadily uncovering something unbelievably hideous . . .

This complete self-study course on coding combines content, practice, and self-assessment into one online learning tool that the learner can follow at his or her own pace. The online program assumes the role of instructor, guiding individuals through the material and directing them when to read relevant sections from the text, checking their comprehension along the way, and providing feedback and encouragement. Users follow the program and learn at their own pace, working through chapter "lesson lectures" and reading assigned sections of the text as they progress. Interactive exercises, questions, and activities allow users to check their comprehension and learn from immediate feedback. Illustrations clarify concepts and familiarize students with the clinical procedures they are learning to code. Chapter exams are scored and incorporated in a grade book, which users can view to evaluate their progress. A series of approximately 18 SlideShows with audio narration explain and demonstrate clinical procedures. Hypertext links incorporated into the lesson lectures open pop-up boxes with further explanations and/or definitions of concepts and terms. Links to relevant web sites provide additional resources to enhance learning or stimulate discussion within a cohort group. An extensive glossary of approximately 650 terms provides correct definition for key terms throughout the course. All content has been updated to current industry standards; for use with Step-by-Step Medical Coding, 5th Edition ensuring that students learn from the most up-to-date material available. Each online chapter includes engaging "lesson lectures" by the author, guiding the learner through the online and text content. Interspersed self-comprehension questions, learning activities, and lesson quizzes throughout the online content allow learners to check their comprehension and learn from feedback. End-of-chapter review and self-assessment exercises include a specially created case-based coding activity, as well as matching, fill-in-the-blank, and multiple choice. Answers to the textbook exercises allow students to check their work on the exercises printed in the text against the answers posted within the course.

The U.S. population is aging, and occupational therapy practitioners working with older adults must have the skills to address multiple health issues, including vision loss. Although typical aging does not cause low vision, four major causes of vision impairment are directly related to the aging process: (1) age-related macular degeneration (AMD), (2) diabetic retinopathy, (3) glaucoma, and (4) cataracts. Instances of these impairments are expected to double by the year 2050, making low vision a significant public health issue. This Practice Guideline includes occupational therapy assessment and intervention guidelines for older adults who have visual acuity impairments, visual field impairments, or both as a result of a low vision diagnosis. Screening, referral, and evaluation are covered for clients for central visual field impairments, such as AMD and cataract; peripheral field impairments, such as glaucoma, hemianopsia, and quadrantanopsia; and mixed visual field loss, such as diabetic retinopathy. This work can help occupational therapists and occupational therapy assistants, as well as individuals who manage, reimburse, or set policy regarding occupational therapy services, understand the contribution of occupational therapy to treating older adults with low vision. Appendixes include selected diagnostic and billing codes and evidence tables.
