National Registry of Certified Medical Examiners - Notice of Proposed Rulemaking (US Federal Motor Carrier Safety Administration Regulation) (FMCSA) (2018 Edition) The Law Library presents the complete text of the National Registry of Certified Medical Examiners - Notice of Proposed Rulemaking (US Federal Motor Carrier Safety Administration Regulation) (FMCSA) (2018 Edition). Updated as of May 29, 2018 The FMCSA proposes to establish and maintain a National Registry of Certified Medical Examiners (NRCME) and to require that all medical examiners who conduct medical examinations for interstate commercial motor vehicle drivers complete certain training concerning FMCSA physical qualification standards, pass a test to verify an understanding of those standards, and maintain competence by periodic training and

testing. Following establishment of the NRCME and a transition period, FMCSA would accept as valid only medical examiners' certificates issued by medical examiners listed on the NRCME. The FMCSA is developing the NRCME program to improve highway safety and driver health by requiring that medical examiners be trained and certified to determine effectively whether a commercial motor vehicle driver's health meets FMCSA standards. The program implements requirements in 49 U.S.C. 31149 and supports FMCSA's goal to improve safety and reduce fatalities on our Nation's highways. Breaking News! Even more stringent requirements are being looked at by the Federal Motor Carrier Safety Administration (FMSCA). It is very important to be informed; drivers are encouraged to review this information, and see if it applies directly to them. There have been many changes to the Commercial Driver's Licensing (CDL) Medical Examination. Dr. Ziegler has examined hundreds of truck drivers, and started to see a common bond as to why many were not achieving the maximum two year certification. Obesity, poor eating habits, and lack of general nutritional knowledge became evident. As a service to the drivers who were struggling with their weight, Dr. Ziegler started to give tidbits and hints on proper eating. It was his hope the truckers would improve not only on their testing, but make lifestyle changes as well. Much

to his amazement, several drivers showed immediate results. Dr. Ziegler started to set his advice on paper, and followed through with this book. Included in this book is the number one reason drivers are immediately disqualified; it is not the one most people would guess! Also, several diets are presented, and an interview with a long time, long haul driver who has consistently kept his weight off and maintained excellent health!

PREFACE The Commander, United States Special Operations Command (USSOCOM) directed that all Special Operational Forces (SOF) Medics be trained to a single, interoperable standard. He directed that the USSOCOM's Advanced Tactical Practitioner's (ATP) Critical Task List (CTL) be implemented into all SOF enlisted medical training as a minimum standard. Upon completion of SOF medical training, all SOF students are required to sit and successfully pass the USSOCOM Advanced Tactical Practitioner's Certification Examination as official

recognition and proof of the student's knowledge of the CTL medical requirements. This study guide reflects the hybrid nature of the USSOCOM certification examination. Where applicable, SOF medical requirements and standards have been merged with the DOT based curriculum. The DOT/Civilian standards of care are always applicable to the military but there may be times when it is difficult to achieve. Many questions on the examination will be appropriate in either setting. Where so, there has been an attempt both on the examination and in this study guide, to differentiate the standard of care in the pertinent setting. The ATP student will find that like the Department of Transportation's Curriculum and the National Registry's Certification program and any other "Medical Certification" process; most of the material covered within the pages of this study guide will be covered during the student's formal phase of instruction. However, some of it may not. The student must recognize that not all subject material can be taught in a formal setting. It is the ATP student's responsibility to use this study guide to complement their formal instruction in preparation to successfully pass the USSOCOM ATP Certification Examination.

A book based on decades of occupational health experience in the industrial clinic setting This

book focuses on the development and administration of independent facilities or departments devoted to the injured worker. Until recently, this area was a largely ignored aspect of occupational health. Now, solo practitioners, partnerships, small and large multispecialty groups, HMOs, and hospitals are showing tremendous interest in developing single purpose facilities or divisions related to this type of practice. Basic Occupational Medicine: A Guide to Developing Delivery Systems addresses the critical need for a guide that explains startup considerations, maintaining the operation, and caring for patients. Topics discussed include proper reporting and charting; the nature of examinations and screening; the role of the Physician's Assistant; working with in-plant nurses; and maintaining relationships with physicians in other departments and the community. A special section is devoted to starting up and operating a facility, including critical information such as advertising and marketing, staffing, equipment, and site location. The book also contains an index with samples of types of forms needed for this business. Basic Occupational Medicine: A Guide to Developing Delivery Systems will benefit administrators, hospital directors, group medical directors, urgent care center directors, physician's assistants, occupational health nurses, insurance carriers, and employers involved with industrial health clinics.
