A critical element in maintaining engine safety and in providing post-production service and support of a commercial aircraft engine is the complete worldwide network of maintenance, repair, and overhaul facilities. Matching forecasted shop visit demand to network-wide capacity is essential to ensuring the required resources are in place to quickly repair and return these assets to the airline customer. A capacity analysis methodology is developed to characterize and analyze the current network capacity for the PW1100G Geared Turbofan engine model for Gate 3 Engine Testing processes. This capacity model is then compared to the anticipated monthly shop visit demand for engine repair services through 2026. By identifying capacity shortages earlier in the program, Pratt & Whitney can proactively plan for and fund additional resources to improve capacity, ensuring the required capacity is in place when demand materializes to reduce shop visit delays. The results of the PW1100G capacity study are utilized both to provide recommendations for the anticipated timeframe when additional resources will be required to meet projected demand and to outline major planning milestones required to meet the resource need date.

After the IPS2 conferences in Cranfield and Linköping in 2009 and 2010 the 3rd CIRP International Conference on Industrial Product Service Systems (IPS2) 2011 takes place in Braunschweig, Germany. IPS2 itself is defined as “an integrated industrial product and service offering that delivers value in use”. The customers expect comprehensive solutions, which are adapted to their individual needs. IPS2 offers the possibility to stand out from competition and for long-term customer loyalty. Particularly in times of economic crisis it becomes apparent which producing companies understand to satisfy the needs and requirements of their customers. Especially in this relatively new domain IPS2 it will be important to keep track of the whole context and to seek cooperation with other research fields and disciplines. The 3rd CIRP International Conference on Industrial Product Service Systems (IPS2) 2011 serves as a platform for such collaborations and the discussion of

The major objective of this book was to identify issues related to the introduction of new materials and the effects that advanced materials will have on the durability and technical risk of future civil aircraft throughout their service life. The committee investigated the new materials and structural concepts that are likely to be incorporated into next generation commercial aircraft and the factors influencing application decisions. Based on these predictions, the committee attempted to identify the design, characterization, monitoring, and maintenance issues that are critical for the introduction of advanced materials and structural concepts into future aircraft.
