Get Better Results with high quality content, exercise sets, and step-by-step pedagogy! Tyler Wallace continues to offer an enlightened approach grounded in the fundamentals of classroom experience in Beginning and Intermediate Algebra. The text reflects the compassion and insight of its experienced author with features developed to address the specific needs of developmental level students. Throughout the text, the author communicates to students the very points their instructors are likely to make during lecture, and this helps to reinforce the concepts and provide instruction that leads students to mastery and success. The exercises, along with the number of practice problems and group activities available, permit instructors to choose from a wealth of problems, allowing ample opportunity for students to practice what they learn in lecture to hone their skills. In this way, the book perfectly complements any learning platform, whether traditional lecture or distance-learning; its instruction is so reflective of what comes from lecture, that students will feel as comfortable outside of class as they do inside class with their instructor.

College Algebra provides a comprehensive exploration of algebraic principles and meets scope and sequence requirements for a typical introductory algebra course. The modular approach and richness of content ensure that the book meets the needs of a variety of courses. The text and images in this textbook are grayscale.

An important feature of the new edition is the alignment of the activities with the Common Core Math Standards for algebra for grades six through high school. Every standard is supported by at least one activity, and many are supported by two or more. The rest of the activities address prerequisite skills related to the standards. The number and diversity of the activities in this resource will help teachers to meet the needs of the various abilities and learning styles of their students. The book is designed for easy use. Each section is divided into two parts: a summary of the activities, which includes teaching notes and answers, followed by the reproducibles of the section. The activities stand alone and can be used to supplement instruction and reinforce skills and concepts. Many are self-correcting, a feature that adds interest for students and saves time for teachers. The nine sections of the book are: Section 1: The Language of Algebra (Using Whole Numbers) Section 2: Integers, Variables, and Expressions Section 3: Linear Equations and Inequalities Section 4: Graphing Linear Equations and Inequalities Section 5: Basic Operations with Monomials and Polynomials Section 6: Factors of Monomials and Polynomials Section 7:

Functions Chapters 5-8 focus on Trigonometry. In Precalculus, we approach trigonometry by first introducing angles and the unit circle, as opposed to the right triangle approach more commonly used in College Algebra and Trigonometry courses. Chapter 5: Trigonometric Functions Chapter 6: Periodic Functions Chapter 7: Trigonometric Identities and Equations Chapter 8: Further Applications of Trigonometry Chapters 9-12 present some advanced Precalculus topics that build on topics introduced in chapters 1-8. Most Precalculus syllabi include some of the topics in these chapters, but few include all. Instructors can select material as needed from this group of chapters, since they are not cumulative. Chapter 9: Systems of Equations and Inequalities Chapter 10: Analytic Geometry Chapter 11: Sequences, Probability and Counting Theory Chapter 12: Introduction to Calculus

How can we deal with the diversity of theories in mathematics education? This was the main question that led the authors of this book to found the

Networking Theories Group. Starting from the

shared assumption that the existence of different theories is a resource for mathematics education

research, the authors have explored the possibilities of interactions between theories, such as

contrasting, coordinating, and locally integrating

them. The book explains and illustrates what it

means to network theories; it presents networking as a challenging but fruitful research practice and

shows how the Group dealt with this challenge

considering five theoretical approaches, namely the approach of Action, Production, and Communication

(APC), the Theory of Didactical Situations (TDS), the Anthropological Theory of the Didactic (ATD), the

approach of Abstraction in Context (AiC), and the

Theory of Interest-Dense Situations (IDS). A synthetic presentation of each theory and their connections shows how the activity of networking generates questions at the theoretical, methodological and practical levels and how the work on these questions leads to both theoretical and practical progress. The core of the book consists of four new networking case studies which illustrate what exactly can be gained by this approach and what kind of difficulties might arise.

The book juxtaposes economic analysis with moral philosophy, political theory, egalitarianism, and other methodological principles.
