Subdued oil prices prompted a trimmed federal budget for 2016 as the UAE, like other countries in the region, tightened its belt in response to falling hydrocarbons revenues. However, a sustained focus on economic diversification and targeted investment in Abu Dhabi's key non-oil sectors in recent years means the emirate is well positioned to weather the storm. Looking forward, plans for future development are mapped out in Abu Dhabi Economic Vision 2030, a comprehensive economic policy document that aims to reduce dependence on oil and gas, thereby creating a more sustainable knowledge-based economy for the emirate and its inhabitants. Aided by hydrocarbons reserves that are among the world's largest and substantial financial resources, Abu Dhabi has built up a strong foundation to become a regional leader and an increasingly important global player in a wide variety of sectors, including oil and gas, financial services, health care, aviation and renewable energy.

This book will explore the great opportunities and challenges which exist in conducting clinical trials in developing countries. By exploring the various regulations specific to the major players and providing insight into the logistical challenges

including language barriers, this book provides a working tool for clinical researchers and administrators to navigate the intricacies of clinical trials in developing countries. Important topics such as ethical issues will be handled very carefully to highlight the significant differences of conducting this work in various jurisdictions. Overall, it will present a clear and comprehensive guide to the ins-and-outs of clinical trials in various countries to assist in design, development, and effectiveness of these trials. Contributors include high-profile, respected figures who have paved the way for clinical trials in developing countries Provides hands-on tools for regulatory and legal requirements and qualification, design, management, and reporting Case studies outline successes, failures, lessons learned and prospects for future collaboration Includes country-specific guidelines for the most utilized countries Foreword by David Feigel, former Head of CDRH at FDA

Purpose & Impact is the first book aiming to provide guidance to senior executives and professionals for how to rethink and even relaunch careers that align with wider purpose and societal impact. With our increasing longevity, the concept of retirement is becoming redundant, as executives need, financially, and want, motivationally, to continue to work well beyond what is currently considered 'retirement age'. Around age 50, when we often leave our

mainstream employers, we could be looking forward to around 30 healthy years, equivalent to a whole second career. This book, therefore, sets out a topic that is becoming increasingly important and urgent for governments, companies and executives alike. This book is underpinned by research (including interviews with over 90 senior executives) conducted by the author. Many of their stories are interspersed throughout the book to provide the reader with real insight into how very diverse senior executives and professionals created roles that enabled their own personal growth and development and had positive impacts on wider society. In addition, helpful tools and guides are used throughout the book to help the reader in their decision-making processes through the different stages of discovering and developing themselves and their career goals.

Two leading oncologists, along with experts spanning several medical disciplines, shed light on the global pandemic of cancer, particularly the difference in diagnosis, treatment, and care between global communities. • Includes a comprehensive and up-to-date review of the global epidemiology of the disease • Offers perspectives from contributors in fields of oncology, radiation, surgery, pharmacy, and public health • Reveals the 5 leading behavioral and dietary risks that contribute to 30 percent of all cancers worldwide • Examines how the HIV/AIDS and HPV epidemics have helped—and hurt—the fight

against cancer globally

This book presents contributions from leading international experts in the field of nephrology. Each chapter is independent and discusses nephrology in the author's country, including the history of nephrology development, kidney disease epidemiology, clinical nephrology, dialysis practice in acute and chronic renal failure settings (hemodialysis, hemodiafiltration, peritoneal dialysis), pediatric nephrology, and kidney transplantation. In addition, the book covers topics such as the job market for nephrologists, reimbursement, nephrology education, and the number of

professionals in the private and public sectors. With 53 chapters and more than 300 authors from all continents offering a unique perspective on nephrology practice, it provides a much-needed information source for nephrologists around the globe. The reader will be able to travel through “Nephrology Worldwide”, a pleasant reading experience with not only relevant information and updated data, but also a comprehensive look at the history, countries’ peculiarities, and a critical analysis of the scenario of nephrology and renal replacement therapy. A valuable resource for healthcare professionals and other stakeholders interested in learning about the status quo of Nephrology Worldwide. “Both the failings and the successes are outlined in a way that should make this book a compelling read, not just for the well-informed renal physician, but also for planners and policy makers whose thinking and actions are integral to the way we practice medicine.” - Sir Peter J. Ratcliffe, Nephrologist and 2019 Nobel Prize Winner More information on the Nephrology Worldwide initiative can be found at www.nephrologyworldwide.com.

Design for Pediatric and Neonatal Critical Care provides an overview of the design and research issues associated with the development of environments for pediatric and neonatal intensive care. This is the first and only book dedicated to this topic and was created to support individuals interested in developing and studying critical care environments for children and their families. In addition to a detailed analysis of the literature from research and practice, the author provides a summary of the historical development of critical care for infants and children, and information regarding the role of PICUs and NICUs in the critical care system. A discussion of current codes and future trends is also provided. Design for Pediatric and Neonatal Critical Care includes essays from prominent voices in the field ranging from inspired young

architects and researchers to world-renowned healthcare design and research icons. Illustrations of work that has been identified as exemplary or representative of recent directions are included, which will help those planning new or remodeled projects to identify and examine precedents. This book is intended to help designers and researchers enhance healing environments for young patients in critical care settings and provide information in support of the families and staff who provide care for these children and infants.

Providing evidence of the role of human capital on innovation in the Middle East, this edited collection closely examines the unique nature of the workforce in this region. It highlights the challenges that the United Arab Emirates faces in becoming more globally competitive, with emphasis on its unique socio-cultural context and a rapidly changing institutional set up.

Filling a growing need for research – particularly in the context of the UAE’s ambition to become one of the world’s most innovative countries – the authors address six main themes: happiness; employee incentives; the restructuring and integration of employees; inclusion and diversity; employer and nation branding; and human capital and innovation. This book examines the global best practices firms in the UAE need to adopt in order to overcome weaknesses, setting an agenda for future research in the context of human capital and human resource management for the UAE.

The definition of Market Access was first reported by the World Trade Organization as “to open markets for trade and improve transparency, reciprocity, and non-discrimination in international trade”. Pharmaceutical Market Access is different and it could be defined as achieving the optimal price for a product or service and/or the maximum reimbursement for the approved target population with no restrictions on funding for the medical technology. By the

way, Market Access is not only the market authorization, but it also includes overlapping activities like pricing, health technology assessment, formulary, and reimbursement. Market Access is one of the most important activities for pharmaceutical companies and emerging countries represent an important opportunity for launching new products. It was reported that the Compounded Average Growth Rate (CAGR) was 6.0% in the period 2011-2017, and expected sales exceeding 1.1 trillion USD by 2017 for emerging countries. Furthermore, CAGR 2008-2012 for recently launched pharmaceuticals were 9.8% for emerging countries and 1.5% for the top 8 developed countries. The Market Access processes in the most important emerging countries in the selected regions are defined in this book with the aim to help local experts, local government officers, headquarter managements, and everyone who want to learn more about healthcare system and health policies pathways of Market Access, mapping and structure of decision makers, challenges and catalyzers for Market Access in the emerging countries.

This is the first book to examine challenges in the healthcare sector in the six Gulf Cooperation Council (GCC) countries (Saudi Arabia, Oman, the United Arab Emirates, Qatar, Kuwait, and Bahrain). These countries experienced remarkably swift transformations from small fishing and pearling communities at the beginning of the twentieth century to wealthy petro-states today. Their healthcare systems, however, are only now beginning to catch up. Rapid changes to the population and lifestyles of the GCC states have completely changed—and challenged—the region's health profile and infrastructure. While major successes in combatting infectious diseases and improving standards of primary healthcare are reflected in key health indicators, new trends have developed; increasingly “lifestyle” or “wealthy

country” diseases, such as diabetes, heart disease, and cancer, have replaced the old maladies. To meet these emerging healthcare needs, GCC states require highly trained and skilled healthcare workers, an environment that supports local training, state-of-the-art diagnostic laboratories and hospitals, research production and dissemination, and knowledge acquisition. They face shortages in most if not all of these areas. This book provides a comprehensive study of the rapidly changing health profile of the region, the existing conditions of healthcare systems, and the challenges posed to healthcare management across the six states of the GCC. We live in a time ravaged by the use of the Internet. Pluck a man out from a past century and drop him onto our planet, it would not be long before he would be amazed, or horrified, by thing we call the internet and what it has enabled us to do. The trade of goods was traditionally done by a hand-to-hand exchange, in which case, if any problem were to arise on the quality of the good or the amount paid, one could instantly manage it with the other party, face-to-face. The problem we face today is that in light of the online purchases we undertake, disputes over the state of the goods received entail complications in ascertaining who is to be held liable. In the United Kingdom, legislation has been introduced to regulate these modern-day scenarios. Sales of goods are covered by the Sale of Goods Act 1979. The Act will only apply when the buyer has not seen the products that have been purchased, and have proceeded with the sale based on the reasonable contemplation of the parties about how the item was portrayed to look. In this issue of Court Uncourt, our lawyers in Dubai will explain a broad range of legal matters ranging from the bankruptcy code in the United Arab Emirates to the distinction between tax avoidance and tax evasion. Through this information outlet, we intend to keep our readers updated on the latest legal developments around the world.

We wish you an enlightening read of this issue of Court Uncourt and a Happy New Year!

A comprehensive and granular insight into the challenges of promoting rational medicine, this book serves as an essential resource for health policy makers and researchers interested in national medicines policies. Country-specific chapters have a common format, beginning with an overview of the health system and regulatory and policy environments, before discussing the difficulties in maintaining a medicines supply system, challenges in ensuring access to affordable medicines and issues impacting on rational medicine use. Numerous case studies are also used to highlight key issues and each chapter concludes with country-specific solutions to the issues raised. Written by highly regarded academics, the book includes countries in Africa, Asia, Europe, the Middle East and South America.

Already established as a classic comprehensive reference for the whole team at the IVF clinic, this new edition has been extensively revised, with the addition of several important new contributions on laboratory (including advanced sperm selection techniques for ICSI, human embryo biopsy procedures, oocyte activation, managing an oocyte bank, artificial gametes, and epigenetics) as well as on clinical topics (including GnRH agonist triggering, segmentation of IVF treatment, uterus transplantation, and risk and safety management). As previously, methods, protocols, and techniques of choice are presented by eminent contributors internationally. Medical Materialities investigates possible points of cross-fertilisation between medical anthropology and material culture studies, and considers the successes and limitations of both sub-disciplines as they attempt to

understand places, practices, methods, and cultures of healing. The editors present and expand upon a definition of 'medical materiality', namely the social impact of the agency of often mundane, at times non-clinical, materials within contexts of health and illness, as caused by the properties and affordances of this material. The chapters address material culture in various clinical and biomedical contexts and in discussions that link the body and healing. The diverse ethnographic case studies provide valuable insight into the way cultures of medicine are understood and practised.

This publication characterizes the environmental burden of disease in the United Arab Emirates (UAE), measured by the excess number of deaths and illnesses in the population due to exposure to environmental hazards. The robust methods used in this risk analysis can be applied to any country or region. This publication documents the systematic, multi-step process used to identify environmental priorities and the detailed methods used to quantify the disease burden attributable to each risk. Based on the results of the burden of disease assessment, the publication summarizes the subsequent steps that are recommended to further reduce the burden of disease resulting from various environmental risk factors. ? Authors and Contributors This book represents the synthesis of research carried out by a large, interdisciplinary team from several institutions and multiple nations between June 2008 and June 2011. The lead authors are responsible for weaving together the pieces prepared by the team. Nonetheless, this book

would not have been possible without major contributions from each team member. The list below shows contributors to each chapter. Following this list are biographies of all of the authors and contributors. Lead Authors Jacqueline MacDonald Gibson, Frederic J. P. Launay, Jens T. W. Encyclopedia of Pharmacy Practice and Clinical Pharmacy covers definitions, concepts, methods, theories and applications of clinical pharmacy and pharmacy practice. It highlights why and how this field has a significant impact on healthcare. The work brings baseline knowledge, along with the latest, most cutting-edge research. In addition, new treatments, algorithms, standard treatment guidelines, and pharmacotherapies regarding diseases and disorders are also covered. The book's main focus lies on the pharmacy practice side, covering pharmacy practice research, pharmacovigilance, pharmacoeconomics, social and administrative pharmacy, public health pharmacy, pharmaceutical systems research, the future of pharmacy, and new interventional models of pharmaceutical care. By providing concise expositions on a broad range of topics, this book is an excellent resource for those seeking information beyond their specific areas of expertise. This outstanding reference is essential for anyone involved in the study of pharmacy practice. Provides a 'one-stop' resource for access to information written by world-leading scholars in the field Meticulously organized, with articles split into three clear sections, it is the ideal resource for students, researchers and professionals to find relevant information Contains concise and accessible chapters that are ideal as an authoritative introduction for non-specialists and readers from the undergraduate level upwards Includes

multimedia options, such as hyperlinked references and further readings, cross-references and videos

“Dorman and De Chesnay...offer a wealth of valuable information students and other healthcare providers would normally not receive until they were in the trenches of their global experience...[They] deliver...nuances of ideology about care and disease from a number of different countries, what global health policy entails and means to healthcare providers traveling the world, along with case studies from a number of guides/experienced global experts.” -Lorna Kendrick, PhD, APRN, PMHCNS-BC Professor and Director, School of Nursing, California State University San Marcos

From the Foreword

Case Studies in Global Health Policy Nursing unpacks key global health issues and analyzes the surrounding health care policies and their impact through case studies. Designed specifically for graduate nursing students, this text explores the implications of global initiatives designed to eradicate disease and promote physical and mental health. As globalization takes a front row seat in the digital age and political dynamics shift more rapidly than ever, possibilities and opportunities for health care have arisen beyond the hospital-based focus, especially for diseases and trends that cross continental divides. Every case study contains a multidisciplinary perspective, featuring contributions by expert nurses, public health professionals, and policy researchers. Presented in a consistent format for ease of use, each case study includes an overview, background, relevant research, and in-depth information on its significance as a critical

global issue. This text covers critical, current topics such as health care for transgender individuals, refugees, and patients on the autism spectrum, as well as ongoing problems like access to clean water, HIV/AIDS, and human trafficking. End-of-chapter exercises reinforce content and supplementary instructor materials are available. Key Features: Delivers topical, in-depth examination of key global issues for graduate-level nursing students Provides consistent format for each case study for ease of use Presents an interdisciplinary approach with content from expert nurses, public health professionals, and policy researchers

This book addresses the pressing issues involved with the ethical conduct of research in one developing world region – the Arab Region. Clinical research has soared in the developing world -as pharmaceutical companies continue their search for regions with large, treatment naive populations - including the Arab region, and has profound implications for the health and the economies for the area. The ethical issues involved with the conduct of such research, however, have so far not been adequately addressed. This volume presents the issues regarding research ethics and research governance that have relevance for health authorities, regulators, industry, and academia. As a multi-authored volume it includes both international and local experts on ethical issues in research, representing all stakeholders, thus presenting a balanced view on this timely topic.

Hospital information systems (HIS) have changed spectacularly since the introduction of computers in health care organizations in Abu Dhabi as per the Health

Authority (HAAD) Standards. These changes were inevitable not only because of the changes in the information technology (IT), but mainly because of the realization of the benefits that a computerized hospital offers. Initially, HIS incorporated financial and partial patient care systems. Later, many hospitals started adopting specialized systems in other areas, such as Outpatient Department (OPD), Inpatient Department (IPD), Emergency Department, radiology and laboratory departments, Support Service (like Facility Management Team, Insurance, Billing, Purchase, Medical Records, IT), and Other Services with more emphasis to patient interest. Now, major hospitals and clinics are focusing on complete Paperless HIS by using Electronic Health Records (EHR), Electronic Medical Records (EMR), and E-Authorizations of Insurance Approvals. As a result, the number of the organizational personnel who directly interact daily with computers has also recorded an explosive growth and changing the facilities to Paperless Environment. Due to the complex environment that hospitals function in, the use of HIS has become very important is of importance. When choosing an Information System (IS), hospitals must avoid pitfalls and errors in order to achieve a sustainable computer management information system. The chain or cascade involved in this system include supplier/vendor, local hospital environment and administration, on campus IT staff, continuous quality improvement, and end users. Therefore, the evaluation of HISs is an extremely important issue, which helps to test the effectiveness of these systems. According to DeLone and McLean

(1992), the most widely known measure of IS evaluation is user satisfaction. The literature suggests that user satisfaction can play a vital role and can affect users' behavior toward computer use, which, in turn, can also affect the actual usage of the system.

This book provides an overview of the global pharmaceutical pricing policies. Medicines use is increasing globally with the increase in resistant

microbes, emergence of new treatments, and because of awareness among consumers. This has resulted in increased drug expenditures globally. As the pharmaceutical market is expanding, a variety of pharmaceutical pricing strategies and policies have been employed by drug companies, state organizations and pharmaceutical pricing authorities.

In the crowded and busy arena of obesity and fat studies, there is a lack of attention to the lived experiences of people, how and why they eat what they do, and how people in cross-cultural settings understand risk, health, and bodies. This volume addresses the lacuna by drawing on ethnographic methods and analytical emic explorations in order to consider the impact of cultural difference, embodiment, and local knowledge on understanding obesity. It is through this reconstruction of how obesity and fatness are studied and understood that a new discussion will be introduced and a new set of analytical explorations about obesity research and the effectiveness of obesity interventions will be established.

Following on from 2015's Healthcare Reform, Quality and Safety: Perspectives, Participants, Partnerships and Prospects in 30 Countries, this book encompasses a global perspective on healthcare while shifting the focus from reform to showcasing success stories of healthcare systems worldwide. It provides explanations of why various facets of healthcare systems work well in different contexts and offers the reader alternative

models for consideration. The book features contributions from 60 countries, going much further than the common practice of focusing on affluent Western nations, to provide a comprehensive exploration of the success of healthcare systems globally. The majority of literature on health-sector improvement attempts to address the problems within systems, relating the errors that can and do occur, for example, and offering solutions and preventative strategies. This book of country case studies will approach the enhancement of health systems, patient safety and the quality of care in a new and innovative way, comprehensively surveying and synthesizing the success stories of healthcare systems around the world, utilizing Hollnagel's Safety-II approach to acknowledge the importance of exploring what goes right, what works well, and why it works. These success stories may include reference to macro, meso or micro levels of healthcare systems, various sectors (e.g., aged care, acute care or primary care), or specific programs or projects. *Health System Improvement Across the Globe: Success Stories from 60 Countries* is unprecedented in terms of both reach and positive emphasis, and as such will be instrumental in changing ways of thinking about and guiding health-sector improvement.

In the last three decades, revolutionary achievements have taken place in nutraceutical and functional food research including the introduction of a number of cutting-edge dietary supplements supported by human clinical trials and strong patents. Novel manufacturing technologies including unique extraction processes, bioavailability improvements through delivery

technologies such as nanotechnology, and innovative packaging have been critical steps for their successful positioning in the marketplace and consumer acceptance worldwide. Nonetheless, mixed messages have emerged from both the scientific community and the media concerning the potential benefits of foods and nutrients in the treatment and prevention of disease. This confusion, in addition to existing marketed products making questionable health claims, have led health practitioners and consumers to become skeptical about nutritional claims of new and emerging food products. *Clinical Aspects of Functional Foods and Nutraceuticals* provides an extensive overview of the clinical aspects of functional foods and nutraceuticals. It contains information on both nutritional challenges and potential health benefits of functional foods and nutraceuticals. In addition to exploring the underpinning science, the book also focuses on food innovation, functional foods in human health, food–drug interactions, functional foods in medicine, the seed-to-clinic approach, global regulatory frameworks, challenges, and future directions. The book provides an essential overview of the clinical aspects surrounding functional foods and nutraceuticals for key stakeholders, drawing links between areas of knowledge that are often isolated from each other. This form of knowledge integration will be essential for practice, especially for policy makers and administrators. Although the emirate’s economic growth can be primarily attributed to its vast hydrocarbons resources, it has also made progress diversifying into new sectors such as manufacturing, tourism, aerospace, defence,

finance and logistics. In addition to its economic investments, Abu Dhabi has also made major contributions to social welfare as well as infrastructure, which has been identified as the bedrock for future growth. The government has played a key role in the expansion of the security, aerospace and defence industry over the past decade in an effort to strengthen the UAE's defence capabilities and as a means of boosting economic diversification. Despite challenges such as a high level of regional competition, most local defence and aviation firms expect to see continued expansion for years to come. The evidence suggests that the emirate has succeeded in nurturing new economic sectors and is on track to meet its goals. The oil and gas sector accounted for 56.5% of Abu Dhabi's GDP at current prices in 2012, followed by construction (9.6%), manufacturing (5.9%) and real estate (4.4%). Hydrocarbons revenues still form the bulk of Abu Dhabi's GDP and while falling prices are a concern, the emirate has been moving steadily towards its economic diversification targets in line with Abu Dhabi Economic Vision 2030. The past 10 years has seen the non-oil sector expand strongly on the back of business-friendly government policies, as a result of which non-oil sector growth now outpaces that of the oil sector. Outside of hydrocarbons, construction and manufacturing represent the biggest GDP contributors in the emirate, with the construction sector poised to enter a period of renewed expansion and manufacturing identified as a key area for future growth, leveraging the emirate's natural resources, growing downstream capabilities and

strategic location. Elsewhere Abu Dhabi's financial sector continues to assert itself and the expected 2015 launch of Abu Dhabi Global Market, the UAE's second financial free zone, is expected to boost activity in the sector. Meanwhile visitor numbers to Abu Dhabi continue to rise, with around 3.5m arrivals in 2014, up 25% on the previous year. This growth is expected to continue as major infrastructure upgrades continue apace. These include the expansion of Abu Dhabi International Airport and the development of the 1200-km wide Etihad rail project.

When I was only starting the therapeutic work with the Middle Eastern patients, I was looking for some kind of guidance to enable my genuine understanding of the Muslim patient cases. However, the material was scarce, haphazardly scattered, and mostly referring to the traditional therapies. That was not helpful and was even more confusing. With time, I managed to amass my own systemized data based on regular observations, practical cases, reflections, and exchanges with the colleagues. This material helped me to approach each case individually while respecting the cultural environment of a patient. Eventually, the book was published. This is the kind of book that I have always wanted to find, and I had to write it eventually by myself. The work contains the systematized knowledge on the evolution of scientific psychology in the Islamic world, which starts with the prophetic times and continues until now. The book reveals the signifiers, which form a structure of a Muslim psyche. It also exposes the recurrent mental health complaints of the Arab patients and investigates their

unconscious roots. The book is intended, first of all, for professionals who are directly related to the Muslim mental health-care system. Secondly, it is for anyone who is considering undergoing a personal analysis. And certainly, the edition is for everyone interested in the subject. This book does not intend to bring the answers. It rather continues the dialogue regarding the necessity of creating the psychological-counseling culture in the Muslim world.

Mental Health and Psychological Practice in the United Arab Emirates provides a broad overview the practice of psychology in the UAE. Topics covered span the profession from research to clinical practice to the place of Islam within the broader context of psychology.

Drug Safety in Developing Countries: Achievements and Challenges provides comprehensive information on drug safety issues in developing countries. Drug safety practice in developing countries varies substantially from country to country. This can lead to a rise in adverse reactions and a lack of reporting can exasperate the situation and lead to negative medical outcomes. This book documents the history and development of drug safety systems, pharmacovigilance centers and activities in developing countries, describing their current situation and achievements of drug safety practice. Further, using extensive case studies, the book addresses the challenges of drug safety in developing countries.

Provides a single resource for educators, professionals, researchers, policymakers, organizations and other readers with comprehensive information and a guide on drug safety related issues Describes current

achievements of drug safety practice in developing countries Addresses the challenges of drug safety in developing countries Provides recommendations, including practical ways to implement strategies and overcome challenges surrounding drug safety
