With issues of equity at the forefront of mathematics education research and policy, *Mathematics Teaching, Learning, and Liberation in the Lives of Black Children* fills the need for authoritative, rigorous scholarship that sheds light on the ways that young black learners experience mathematics in schools and their communities. This timely collection significantly extends the knowledge base on mathematics teaching, learning, participation, and policy for black children and it provides new framings of relevant issues that researchers can use in future work. More importantly, this book helps move the field beyond analyses that continue to focus on and normalize failure by giving primacy to the stories that black learners tell about themselves and to the voices of mathematics educators whose work has demonstrated a commitment to the success of these children.

This document is a response to teachers' requests for practical assistance in implementing California's history-social science framework. The document offers stimulating ideas to enrich the teaching of history and social science, enliven instruction for every student, focus on essential topics, and help make learning more memorable. Experiences and contributions of ethnic groups and women in history are integrated in this course model. The framework is divided into 11 units: (1) Connecting with Past Learnings: Uncovering the Remote Past; (2) Connecting with Past Learnings: the Fall of Rome; (3) Growth of Islam; (4) African States in the Middle Ages and Early Modern Times; (5) Civilizations of the Americas; (6) China; (7) Japan; (8) Medieval Societies: Europe and Japan; (9) Europe During the Renaissance, the Reformation, and the Scientific Revolution; (10) Early Modern Europe: The Age of Exploration to the Enlightenment; and (11) Linking Past to Present. Six of the 11 units delineated in the framework's 7th grade course description are developed in these course models. All units follow the same format.

Each begins with a rationale and overview. Ways are suggested for teachers to coordinate the model with the state-adopted textbook for 7th grade. A presentation of activities to introduce and continue the sample topic are suggested to encourage students to apply what they have studied through projects. Each unit ends with an extensive annotated list of sample resources. (DK)

A compendium of more than 240 classroom-tested lessons, this essential resource helps teachers build student understanding and skills and understand how children best learn math. In this third edition, Marilyn Burns has completely revised the first section to reflect what she has learned over the years from her classroom experience with students and her professional development experience with teachers. This section has also been expanded to address these important topics: teaching math vocabulary, incorporating writing into math instruction, linking assessment and instruction, and using children's literature to teach key math concepts. In an entirely new section, Marilyn addresses a wide range of questions she has received over the years from elementary and middle school teachers regarding classroom management and instructional issues.

Focused on physical literacy and measurable outcomes, empowering physical educators to help students meet the Common Core standards, and coming from a recently renamed but longstanding organization intent on shaping a standard of excellence in physical education, National Standards & Grade-Level Outcomes for K-12 Physical Education is all that and much more. Created by SHAPE America — Society of Health and Physical Educators (formerly AAHPERD) — this text unveils the new National Standards for K-12 Physical Education. The standards and text have been retooled to support students' holistic development. This is the third iteration of the National Standards for K-12 Physical Education, and this latest version features two prominent changes:

- The term physical literacy underpins the standards. It encompasses the three domains of physical education (psychomotor, cognitive, and affective) and considers not only physical competence and knowledge but also attitudes, motivation, and the social and psychological skills needed for participation.
- Grade-level outcomes support the national physical education standards. These measurable outcomes are organized by level (elementary, middle, and high school) and by standard. They provide a bridge between the new standards and K-12 physical education curriculum development and make it easy for teachers to assess and track student progress across grades, resulting in physically literate students. In developing the grade-level outcomes, the authors focus on motor skill competency, student engagement and intrinsic motivation, instructional climate, gender differences, lifetime activity approach, and physical activity. All outcomes are written to align with the standards and with the intent of fostering lifelong physical activity. National Standards & Grade-Level Outcomes for K-12 Physical Education presents the standards and outcomes in ways that will help preservice teachers and current practitioners plan curricula, units, lessons, and tasks. The text also
- empowers physical educators to help students meet the Common Core standards;
- allows teachers to see the new standards and the scope and sequence for outcomes for all grade levels at a glance in a colorful, easy-to-read format; and
- provides administrators, parents, and policy makers with a framework for understanding what students should know and be able to do as a result of their physical education instruction. The result is a text that teachers can confidently use in creating and enhancing high-quality programs that prepare students to be physically literate and active their whole lives.
