This book reveals a rich diversity of Anabaptist engagement with Muslims around the world. Here are essays and reports from missionaries in the field, administrators at mission agencies, professors and scholars of mission, and theologians. Among these voices is a spirit of dialogue, questioning, agreeing, amazement, and sometimes dissent. Anabaptists Meeting Muslims does not seek to present a homogenized view that flows through a predetermined Anabaptist ideological grid. Rather it is a forum for giving and receiving counsel and a place to share stories and reflections that will encourage and help to equip Christians for the calling to presence in the way of Christ. 568 Pages.

This publication traces the corporate path to power and influence in the modern world, and explores whether corporations of the future will become superpowers in their own right or, like the dinosaurs, give way to superior forms. It examines how the emergence of empire-building firms in 16th century Europe gave way to the dominance of American corporations in the 19th and 20th centuries, which is now under threat as new types of corporations arise in China and elsewhere. The book offers surprising insights, such as why the explorer Sebastian Cabot incorporated while Christopher Columbus did not, how the US Constitution's silence on corporations gave rise to America's industrial dominance, and how a 19th century company making matches emerged as the Amazon of its day only to later lose its technological edge. It also discusses the many ways in which societies attempt to reign in corporate power, and the strategies of corporations to bypass controls. The text, furthermore, considers the startling ways in which new social movements, emerging business models and developing technologies—from bitcoin to artificial intelligence—will shape the corporations of the future. This book will introduce readers to the legal concept of a corporation, along with the economic and societal factors that gave rise to it as the primary means of conducting business in the modern world. With its broad sweep of history, current relevance, and insightful look to the future, this text will appeal to both scholarly and general audiences.

How better information and better access to it improves the quality of our decisions and makes for a more vibrant participatory society. Information is power. It drives commerce, protects nations, and forms the backbone of systems that range from health care to high finance. Yet despite the avalanche of data available in today's information age, neither institutions nor individuals get the information they truly need to make well-informed decisions. Faulty information and sub-optimal decision-making create an imbalance of power that is exaggerated as governments and corporations amass enormous databases on each of us. Who has more power: the government, in possession of uncounted terabytes of data (some of it obtained by cybersnooping), or the ordinary citizen, trying to get in touch with a government agency? In *Missed Information*, David Sarokin and Jay Schulkin explore information—not information technology, but information itself—as a central part of our lives and institutions. They show that providing better information and better access to it improves the quality of our decisions and makes for a more vibrant participatory society. Sarokin and Schulkin argue that freely flowing information helps systems run more efficiently and that incomplete information does just the opposite. It's easier to comparison shop for microwave ovens than for doctors or hospitals because of information gaps that hinder the entire health-care system. Better information about such social ills as child labor and pollution can help consumers support more sustainable products. The authors examine the opacity of corporate annual reports, the impenetrability of government secrets, and emerging techniques of “information foraging.” The information imbalance of power can be reconfigured, they argue, with greater and more meaningful transparency from government and corporations.

In the fall of 1930, David Packard left his hometown of Pueblo, Colorado, to enroll at Stanford University, where he befriended another freshman, Bill Hewlett. After graduation, Hewlett and Packard decided to throw their lots in together. They tossed a coin to decide whose name should go first on the notice of incorporation, then cast about in search of products to sell. Today, the one-car garage in Palo Alto that housed their first workshop is a California historic landmark: the birthplace of Silicon Valley. And Hewlett-Packard has produced thousands of innovative products for millions of customers throughout the world. Their little company employs 98,400 people and boasts constantly increasing sales that reached \$25 billion in 1994. While there are many successful companies, there is only one Hewlett-Packard, because from the very beginning, Hewlett and Packard had a way of doing things that was contrary to the prevailing management strategies. In defining the objectives for their company, Packard and Hewlett wanted more than profits, revenue growth

and a constant stream of new, happy customers. Hewlett-Packard's success owes a great deal to many factors, including openness to change, an unrelenting will to win, the virtue of sustained hard work and a company-wide commitment to community involvement. As a result, HP now is universally acclaimed as the world's most admired technology company; its wildly successful approach to business has been immortalized as The HP Way. In this book, David Packard tells the simple yet extraordinary story of his life's work and of the truly exceptional company that he and Bill Hewlett started in a garage 55 years ago.
