Originally published in 1987, this book reports the proceedings of a conference held in 1983 at Stanford, California. The purpose of the conference was to bring together individuals whose research reflected advanced theoretical thinking and empirical evidence on the combined analysis of cognitive, conative, and affective processes, the role of these processes in learning from instruction, and the importance of individual differences therein. The Editors believed that this volume made an early and important contribution to the reemphasis and reexamination of the conative and affective aspects of human performance, in coordination with cognitive psychology, in the study of aptitude, learning, and instruction. It takes its place as Volume 3 of the Aptitude, Learning, and Instruction series.

Children face an overwhelming amount of information and a range of different choices every day, and so there has never been a more important time to understand how children learn to make judgments and decisions in our modern world. Individual Differences in Judgment and Decision-Making presents cutting-edge developmental research to advance our knowledge and understanding of how these competencies emerge. Focusing on the role of individual differences, the text provides a complementary theoretical approach to understanding the development of judgment and decision-making skills, and how and why these competencies vary within and between different periods of development. Sampling a diverse set of developmental paradigms and measures, as well as considering typical and atypically developing samples, this volume provokes thinking about how we can support our children and youth to help them make better choices. Drawing on the expertise of a range of international contributors, this book will be of interest to students and researchers of thinking and reasoning from both cognitive and developmental psychology backgrounds.
