It is unfortunate but true that many misconceptions exist regarding teaching English to non-English speakers. Just as one who can read is not by that criterion alone capable of teaching reading, knowing a particular language does not ensure that one can effectively teach it. It is an error to assume that "common sense" can guide one in this regard. True "common sense" is simply not as common as many may believe. What may appear a sensible thing to do in teaching ESOL, may in fact (as one who reads the book will see) prove counter-productive and in turn detrimental to the learning process. This book focuses on subject matter which includes the question of what language actually is (it's components, skills and traits), the history of the English language, past and current ESOL teaching techniques and culture as a factor in language learning. The book is designed to be of value to ESOL teachers and administrators, students preparing to teach ESOL, volunteers in need of learning more about the field and individuals who may simply be interested in the history of the English language and/or ESOL methodology. The book's information is expected to increase the knowledge of readers as well as to help some strengthen and others develop a solid foundation upon which to rely in whatever approach they choose to teach ESOL.

While there is much in the literature on ESL development, this book is the first of its kind to track the development of specific language abilities in an Intensive English Program (IEP) longitudinally and highlights the implications of this particular study's findings for future IEP implementation and practice and ESL and SLA research. The volume draws on many years' worth of data from learners at an IEP at the University of Pittsburgh to explore selected aspects of language development, including lexical, grammatical, speaking, and writing abilities, in addition to placement assessment practices and student learning outcomes. A concluding chapter points to the ways in which these findings can be applied to decision making around IEP curriculum development and the future role of IEPs in higher education more broadly. With its focus on students in IEP settings and the concentration on data from students evaluated over multiple semesters, this volume offers a unique opportunity in which to examine longitudinal developmental patterns of different L1 groups on a variety of measures from the same learners and will be key reading for students and researchers in second language acquisition, English for Academic Purposes, language education, and applied linguistics.

As the United States continues to be a nation of immigrants and their children, the nation's school systems face increased enrollments of students whose primary language is not English. With the 2001 reauthorization of the Elementary and Secondary Education Act (ESEA) in the No Child Left Behind Act (NCLB), the allocation of federal funds for programs to assist these students to be proficient in English became formula-based: 80 percent on the basis of the population of children with limited English proficiency¹ and 20 percent on the basis of the population of recently immigrated children and youth. Title III of NCLB directs the U.S. Department of Education to allocate funds on the basis of the more accurate of two allowable data sources: the number of students reported to the federal government by each state education agency or data from the American Community Survey (ACS). The department determined that the ACS estimates are more accurate, and since 2005, those data have been basis for the federal distribution of Title III funds. Subsequently, analyses of the two data sources have raised concerns about that decision, especially because the two allowable data sources would allocate quite different

amounts to the states. In addition, while shortcomings were noted in the data provided by the states, the ACS estimates were shown to fluctuate between years, causing concern among the states about the unpredictability and unevenness of program funding. In this context, the U.S. Department of Education commissioned the National Research Council to address the accuracy of the estimates from the two data sources and the factors that influence the estimates. The resulting book also considers means of increasing the accuracy of the data sources or alternative data sources that could be used for allocation purposes.
