Dr. Bell's analysis is sometimes provocative, occasionally humorous, and at times controversial.

This is an overview of the most offbeat and underrated vampire movies spanning nine decades and 23 countries. Strange Blood encompasses well-known hits as well as obscurities that differ from your standard fang fare by turning genre conventions on their head. Here, vampires come in the form of cars, pets, aliens, mechanical objects, gorillas, or floating heads. And when they do look like a demonic monster or an aristocratic Count or Countess, they break the mold in terms of imagery, style, or setting. Leading horror writers, filmmakers, actors, distributors, academics, and programmers present their

favorite vampire films through in-depth essays, providing background information, analysis, and trivia regarding the various films. Some of these stories are hilarious, some are terrifying, some are touching, and some are just plain weird. Not all of these movies line up with the critical consensus, yet they have one thing in common: they are unlike anything you've ever seen in the world of vampires. Just when you thought that the children of the night had become a tired trope, it turns out they have quite a diverse inventory after all.

Following the deadly 2017 white supremacist rally in Charlottesville, Virginia, numerous recent, and fatal, attacks on mosques, churches, and synagogues occurring worldwide, and increasing totalitarianism and paranoia spreading through many countries, Dr. Vamik Volkan could no longer ignore the urge to write a new book about large-group problems. In many countries, people are asking the metaphorical question 'Who are we now?' and coming up with seemingly opposite answers. This book looks into the reasons why this is happening. With a summary of Sigmund Freud's ideas about large groups - which focus on the individual - Dr Volkan builds on this base to explain what large-group psychology is in its own right and applies it to present-day society. How it develops in adulthood, the psychology of decision-making and political leader/follower relationships, political propaganda, and exaggerated narcissism in leaders are all examined. We are all members of at least one large group. Looking into large-group identity provides background data for investigating the spread of racism, authoritarian regimes, malignant political propaganda, wall building, and interferences with democratic processes and human rights issues. Large-Group Psychology: Racism, Societal Divisions, Narcissistic Leaders and Who We Are Now is the perfect book for those questioning what is happening in society today and why.

Boundaries of Evolution describes the unlikelihood of evolutionary theory to explain how it is supposed to scale three major biological cliffs. The first cliff is the need for a logical explanation of how random chemical reactions could produce the first living cell from the primordial soup. The second is the problem of explaining how the first single-celled eukaryote evolved from a prokaryote. Mathematical improbabilities of evolutionary theory to scale the first two cliffs, in the time available, are demonstrated. The third insurmountable cliff is the necessity for a reasonable explanation of how millions of different kinds of multi-celled eukaryotes could have quickly evolved from single-celled eukaryotes. Random mutations occurring in DNA, accepted or rejected by natural selection, are hailed as the source of

advancement for the increase in biotic complexity. The most common time for mutations to occur in the DNA is during replication. Therefore, evolutionary advancement should occur faster in biota with the most frequent replication cycles. If both evolutionary theory and the fossil record are correct, prokaryotes, which replicate in as little as 20 minutes took 2 billion years to evolve the first single-celled eukaryote. Single-celled eukaryotes, generally having shorter reproductive times than multi-celled eukaryotes, took another billion years to evolve the first multi-celled eukaryote. Then during Cambrian times, the multi-celled eukaryotes with the longest reproductive cycles literally exploded in diversity in a comparatively short time. How could this be? Other inadequacies of Darwin's theory are presented for everyone to see.
