Should scientific congresses take place in connection with Olympic Games, and should science be represented not only in the form of applied science engaged in the care of athletes, but also as an informing, reflecting and critical authority? The Organizing Committee for the Games of the XXth Olympiad answered this question in the affirmative, and the results have justified this decision. The invitation sent out by the Organizing Committee was accepted by numerous eminent scholars and many participants from all over the world; it was their merit that the general topic of the congress could be discussed in manifold ways under various aspects and without prejudice. For this reason, they deserve our gratitude and appreciation. By now, the congress report has been completed. It is part of the total scientific concept which includes the preparatory publication, "The Scientific View of Sport Perspectives, Aspects, Issues", the congress itself and the present report; and, in close connection therewith, the exhibitions, "100 Years of German Excavation Work in Olympia", "Sport and Medicine" and the literary exhibition. It is to be hoped that this report will prove an important source of information and a stimulus for discussion among participants and scholars, students, teachers and coaches; and that it will safeguard the fruitful continuation of the work initiated by the Munich congress. Thanks are due to those who took pains in preparing this document. It will be an essential element within the framework of all that will remain of the Olympic Games of 1972.

While most fans know that baseball stars Ted Williams, Hank Greenberg, and Bob Feller served in the military during World War II, few can name the two major leaguers who died in action. (They were catcher Harry O'Neill and outfielder Elmer Gedeon.) Far fewer still are aware that another 125 minor league players also lost their lives during the war. There are also stories about Cleveland Stadium and the 1954 All-Star Game (which the team hosted), as well as a season timeline and a firsthand account of Game One of the World Series at the Polo Grounds. *Pitching to the Pennant* features the superb writing and research of members of the Society for American Baseball Research (SABR), making this book a must for all Indians fans and baseball aficionados.

There has been an explosion in the quantity of sports history literature published in recent years, making it increasingly difficult to keep abreast of developments. The annual number of publications has increased from around 250 to 1,000 a year over the last decade. This is due in part to the fact that during the late 1980s and 90s, many clubs, leagues and governing bodies of sport have celebrated their centenaries and produced histories to mark this occasion and commemorate their achievements. It is also the result of the growing popularity and realisation of the importance of sport history research within academe. This international bibliography of books, articles, conference proceedings and essays in the English language is a one-stop for the sports historian to know what is new.

This Volume explores the enormous impact the ethos of Muscular Christianity has had on modern civil society in English-speaking nations and among the peoples they colonized. First codified by British Christian Socialists in the mid-nineteenth century, explicitly religious forms of the ideology have persistently re-emerged over ensuing decades: secularized, essentialized, and normalized versions of the ethos - the public school spirit, the games ethic, moral masculinity, the strenuous life - came to dominate and to spread rapidly across class, status, and gender lines. These developments have been appropriated by the state to support imperial military and colonial projects. Late nineteenth and early twentieth century apologists and critics alike widely understood Muscular Christianity to be a key engine of British colonialism. This text demonstrates the need to re-evaluate the entire history of Muscular Christianity comes chiefly from contemporary post-colonial studies. The papers explore fascinating case materials from Canada, the U.S., India, Japan, Papua, New Guinea, the Spanish Caribbean, and in Britain in a joint effort to outline a truly international, post-colonial sport history. This book was published as a special issue of the *International Journal of the History of Sport*.

Soft Power Politics- Past and Present: Football and Baseball on the Western Pacific Rim illustrates the momentous expanse and moment of sport in the Asia Pacific region and through these essays dealing with two of the most prodigious global team sports confronts various cultural clashes that Samuel Huntington would ensure the end of civilisation. They also demonstrate the power sport has to change the world and to inspire and unite people globally. All who sail under the flag of Sport, as ingenuous as it may seem to the host of cynics that abounds, believe that dialogues that emerge from arguments included in this text represent communication of the highest order and have the potential to produce the cohesion that can close some of those cracks that Huntington said would open up along, what he called the fault lines between civilisations. This book was published as a special issue of the International Journal of the History of Sport.

Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.
