Singapore has few natural resources but, in a relatively short history, its economic and social development and transformation are nothing short of remarkable. Today Singapore is by far the most successful exemplar of material development in Southeast Asia and it often finds itself the envy of development in Southeast Asia and it often finds itself the envy of developed countries. Furthermore over the last three and a half decades the ruling party has presided over the formation of a thriving community of Singaporeans who love and are proud of their country.

The Shanghai school system has attracted worldwide attention since its impressive performance in the Programme for International Student Assessment (PISA) in 2009. The system ranks as a ‘stunning success’ according to standards of the Organisation for Economic Co-operation and Development (OECD). Shanghai also stands out for having the world’s highest percentage of ‘resilient students’ – students from socio-

economically disadvantaged backgrounds who emerge as top performers. Learning From Shanghai: Lessons on Educational Success offers a close-up view of the people and the policies that have achieved such world-class performance. Based on research and personal observation gathered during the author's recent field work with school principals, teachers and students, this book explores the factors that explain Shanghai's exceptional success in education. The approach combines high standards of scholarly research and analysis with the author's unique personal insights, as evidenced by chapters entitled Education is Filling a Bucket and Lighting a Fire and Tiger Mothers, Dragon Children. Drawing on her experience as an education professional and a teacher of teachers, Charlene Tan thoroughly examines and analyzes the people, the policies and the practices that distinguish Shanghai educators. The contents include comprehensive details on the Shanghai approach to quality education, from discussion of the balance between centralization and decentralization, to school autonomy and accountability, to testing policy and professional development for teachers. The book includes detailed tables on curriculum and school performance targets, sample appraisal forms for teachers and students, and dozens of photographs. The author is an Associate Professor at the National Institute of Education, Nanyang Technological University, Singapore.

This book traces the origins and growth of the nonnative speaker teacher movement in TESOL since its birth a decade ago, summarizes the research that has been conducted, highlights the challenges faced by NNS teachers, and promotes NNS teachers' professional growth.

This book uses an in-depth, phenomenological interview approach to explain the generational characteristics of today's Chinese university youths and the critical dispositions they believe indispensable in acquiring English as an academic language in and outside school settings. By presenting the authentic voices of the recruited participants, the book clarifies how English for academic purposes (EAP), as an emerging global phenomenon and a research-informed practice, enables and empowers them for conscious self-transformation and critical awareness development through language study. The book also explores issues arising in the fields of general English language teaching as well as traditional and critical EAP, and discusses university English language learners' learning needs and rights. The book further promotes a dynamic and transformative University EAP pedagogy of particularity, practicality, and possibility moving from the oppression of language education to its liberation, and the increasing critical consciousness among the present and future university youths in a time of great social changes.

conversational interaction and how it relates to individual variables; first language use; feedback on written production; intercultural awareness raising and feedback on diagnostic assessment. It will be of interest to undergraduate and graduate students, researchers, teachers and stakeholders who are interested in research on how children learn a second language at primary school.

Suitable for high school students with high mathematics ability and people above high school level. High school students with higher mathematics ability should learn more in-depth Mathematical Olympiad topics through independent learning methods to further improve their mathematics level, which is conducive to studying university subjects in the future.
