This comprehensive introduction to basic manufacturing processes is ideal for both degree and diploma courses in engineering. With several pedagogical features, the text makes the topics understandable and appealing for students. The book first introduces the concepts of engineering materials and their properties, measurement and quality in manufacturing and allied activities before dwelling upon the details of different manufacturing processes such as machining, casting, metal forming, powder metallurgy and joining. To keep pace with the latest advancements in technology, use of non-conventional resources, applications of computers, and use of robots in manufacturing are also discussed in considerable detail. The text also provides a thorough treatment of topics on economy and management of production.

This timely contribution to the global literature on health inequities approaches the subject through a synthesis and analysis of relevant published literature on India. Amongst the BRICS countries, India ranks the lowest in the gender-gap index and has the highest poverty rate, and there is clear evidence that socio-economic inequalities have increased in India in the twenty-first century. These have direct impact on the health conditions of its people; however, there has been relatively little concerted research attention on health inequities in India. This volume fills the gap by synthesizing research evidence since the year 2000 on the topic. This is perhaps the first volume on this topic of such scope and breadth. Its uniqueness lies in the synthesis of evidence across a range of axes of disadvantages within a single volume: socio-economic position, caste, gender, other socially constructed vulnerabilities such as disability, HIV status, migrant status; and health-system factors contributing to or mitigating inequities in

health. Each core chapter not only summarizes research findings but also engages critically with the perspectives reflected in the chapters and proposes a framework for understanding the mechanisms through which health inequities result. This volume highlights and addresses research gaps in both methodology and content, and is valuable to researchers and students of public health and allied health disciplines, including the social sciences, and also to policy makers and donors.

The latest update to Bela Liptak's acclaimed "bible" of instrument engineering is now available. Retaining the format that made the previous editions bestsellers in their own right, the fourth edition of *Process Control and Optimization* continues the tradition of providing quick and easy access to highly practical information. The authors are practicing engineers, not theoretical people from academia, and their from-the-trenches advice has been repeatedly tested in real-life applications. Expanded coverage includes descriptions of overseas manufacturer's products and concepts, model-based optimization in control theory, new major inventions and innovations in control valves, and a full chapter devoted to safety. With more than 2000 graphs, figures, and tables, this all-inclusive encyclopedic volume replaces an entire library with one authoritative reference. The fourth edition brings the content of the previous editions completely up to date, incorporates the developments of the last decade, and broadens the horizons of the work from an American to a global perspective. Béla G. Lipták speaks on Post-Oil Energy Technology on the AT&T Tech Channel.

Kabir Das was a 15th century mystic, saint and poet of India who happened to be one of the fore-runners and a strong supporter of a religious-cum-spiritual renaissance, the 'Bhakti Movement'. It was an uprising against the rigid manifestation of dogmas and rituals among Hindus as well as oppression at the hands of Muslim rulers in the name of religion. They filled the Indian sacred hearts with doom and dread. Though all the poet-mystics of the time loved God in their own ways, Kabir worshipped, loved and venerated the Supreme-energy manifest as the primordial, formless, pure and the pristine. His verses show a spirit closer and akin to that of Sufis. Though lovelorn, Kabir was far from roaming among the clouds. He stood vociferously against the inane precepts and insane customs of his time involving merciless killings in the name of sacrifice. He also lashed back at the causeless and stupid conflicts between different religions and sects. Kabir's mission lay in equating Ram with Rahim and bridging the gap between the two. His couplets came to be known down generations orally. They were later compiled in a book form called Bijak. In spite of him never holding a paper or pen all his life, his verses have regaled and enthralled Indian Hindi-knowing readers down the centuries and are often recited, sung and quoted to this day.

This book provides a comprehensive overview on several aspects of remote laboratories development and usage, and their potential impact in the teaching and learning processes using selected e-learning experiences. The book is based on the presentations and discussions carried out at «International Meeting on Professional Remote Laboratories», which took place in University of Deusto, Bilbao, in the period of November 16-17, 2006. Apart from chapters based on the presentations, some others have also been included in this book. In this way, we hope to give a broad, well balanced and up-to-date picture of the current status of remote labs and their role within the e-learning paradigm.

Many take advantage of software and hardware accessibility in the English language. However, for non native speakers, this inevitably becomes a problem; specifically for the complex Bangla language which is not easily integrated into the world of technology. Technical Challenges and Design Issues in Bangla Language Processing addresses the difficulties as well as the overwhelming benefits associated with creating programs and devices that are accessible to the speakers of the Bangla language. Professionals, students, and researchers interested in expanding the fields of

Digital technologies are spreading rapidly, but digital dividends--the broader benefits of faster growth, more jobs, and better services--are not. If more than 40 percent of adults in East Africa pay their utility bills using a mobile phone, why can't others around the world do the same? If 8 million entrepreneurs in China--one third of them women--can use an e-commerce platform to export goods to 120 countries, why can't entrepreneurs elsewhere achieve the same global reach? And if India can provide unique digital identification to 1 billion people in five years, and thereby reduce corruption by billions of dollars, why can't other countries replicate its success? Indeed, what's holding back countries from realizing the profound and transformational effects that digital technologies are supposed to deliver? Two main reasons. First, nearly 60 percent of the world's population are still offline and can't participate in the digital economy in any meaningful way. Second, and more important, the benefits of digital technologies can be offset by growing risks. Startups can disrupt incumbents, but not when vested interests and regulatory uncertainty obstruct competition and the entry of new firms. Employment opportunities may be greater, but not when the labor market is polarized. The internet can be a platform for universal empowerment, but not when it becomes a tool for state control and elite capture. The World Development Report 2016 shows that while the digital revolution has forged ahead, its 'analog complements'--the regulations that promote entry and competition, the skills that enable workers to access and then leverage the new economy, and

the institutions that are accountable to citizens--have not kept pace. And when these analog complements to digital investments are absent, the development impact can be disappointing. What, then, should countries do? They should formulate digital development strategies that are much broader than current information and communication technology (ICT) strategies. They should create a policy and institutional environment for technology that fosters the greatest benefits. In short, they need to build a strong analog foundation to deliver digital dividends to everyone, everywhere.
