One of the most widely used series of methods for individual or like-instrument class instruction. Using a very well-rounded approach including scales, arpeggios, technical studies, studies for musicianship, articulation studies, solos, duets, and studies devoted to the special needs of each instrument, this series provides a fantastic wealth of material for all student musicians. Georg Kopprasch was born sometime before 1800, pursued a career as a horn player at least until 1832, and composed two sets of horn etudes which includes this set of 60 etudes, Op. 6. Most of the etudes focus on technical problems relating to the high range of the Horn.

This book of original exercises is the sequel to the first book in this series. The etudes are a mixture of the rhythmic pattern and solo type. Problems of rhythm, technic, and range are dealt with logically and progressively and with ample preparation. In the case of the trombone, special emphasis was placed on writing exercises which would allow economy of slide movement through the use of substitute positions. The book is intended to be supplemental in nature and should be a value to the student by supplying additional material in certain developmental areas encountered in the student's regular method book.
