Buying a company is a demanding, complex process requiring a wide range of skills and abilities. If you understand this process thoroughly, then you are far more likely to make the right purchase decision. Whether you are buying the corner ice cream parlor or a \$100 million business, following certain steps will enhance your chances of successfully operating a profitable venture once the deal is closed. This book should help you to visualize what really goes on in the making of a business deal. Basis for the Book Information for the book is drawn from several sources. The book heavily reflects the first hand, practical experience in deal-making by the author Dr. John Psarouthakis. He has led the buying process for about 40 acquisitions and has been a part of a team of a dozen others during his business career as an entrepreneur and business executive. Most of his direct experience comes from purchasing and selling deals for his own two companies, J.P. Industries, Inc and JPE, Inc. In the 1980's. Psarouthakis founded and built J.P. Industries into a Fortune 500 company by acquiring underperforming auto parts and plumbing products manufacturers, selling the company to a British conglomerate, T&N, PLC, in 1990. Next, he founded JPE, Inc., which manufactured and distributed auto and truck parts for OEM and the aftermarket. Although. Psarouthakis' experience draws heavily on the manufacturing and distribution of durable goods sectors, many aspects of the process are the same, regardless of the industry. Interviews conducted by co-author Lorraine Uhlener with entrepreneurs involved in retailing, service and construction sectors and other published information about the acquisitions process also influence the content of this book. The Importance of Careful Planning A carefully planned and executed search process is likely to improve your odds of finding a company with which you can be successful. Too often, people rush into deals only to find out later that they did not purchase what they had expected. They suffer negative business consequences, such as lower than anticipated profits and sales, as a result. The alternative, careful planning, may cost more initially, and require more effort, but is likely to lead to better business results in the long run. Various studies have found that as high as 60% of acquisitions made fail to meet the acquisition performance goals, ROI, ROE, etc., that were set at the closing and which influenced significantly the price paid. Just 25% met or exceeded those goals; the remaining 15% were indeterminate. There is one overriding reason for this high rate of failure and that is overpaying for the acquired company. Overpayment is a result of 1) an overoptimistic expectation of the market, 2) a higher than realistic estimate of internal improvements/developments, and 3) allowing oneself into a horserace leading to an overprice, due to the bidding process that the seller has succeeded to establish. In order to avoid as much as possible the above, this book presents a process based on many years of experience that resulted in the acquisition of over 50 deals and equivalently the sale of such acquired companies. Successful Acquisition Process - 16 Steps One enters into a rather specific process when one decides to acquire a business and particularly the "right" business. You must manage and control the process if the result is to have a good chance to be the desired one.

The acquisitions process involved several distinct steps and sub-steps that need to be attended to with extreme care and dealt with expertly and skillfully. These steps are: 1. Know what you want to acquire. 2. Set up criteria to guide you on what you want to buy. 3. Set up a plan on how you will proceed. 4. Identify/build your team that will work, do, and manage the process with you. 5. Develop a network of credible sources for acquisition candidates. 6. Screen

The professional development of researchers is critical for the future development of the fields of pediatric and clinical child psychology. In order to conduct research in pediatric and clinical child psychology, researchers need to work with a wide range of populations and master an increasingly wide range of skills, many of which are either not formally taught or considered in sufficient depth in clinical training. Such skills include the development of resources for research by writing grants to government agencies and foundations; skills in preparing research for publications concerning original research, review articles, or case reports; scientific presentation skills; the ability to review and edit scientific manuscripts; and to implement and manage research in applied settings. Moreover, the increasing complexity of research in pediatric and clinical child psychology requires successful researchers in these fields to develop their expertise with a wide range of new specialized methodologies, data analytic methods, models of data analysis, and methods of assessment. Finally, to enhance the relevance of their research to practice, researchers in pediatric and clinical child psychology need to integrate their work with clinical service delivery programs

that are based on empirical research. The necessity to train researchers in pediatric and clinical child psychology in such multifaceted knowledge and skills places extraordinary burdens on professional training programs. Professional researchers in pediatric and child clinical psychology also are challenged to develop new knowledge and skills through continuing education and faculty development programs.
