

Senior Secondary Biology Textbooks

New Secondary Sciences has been specifically written to cover the Ugandan syllabus. This course comprises Students' Books and Teacher's Guides for each subject that meet all the requirements of the syllabus.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

CD-ROM contains: investigations, videos, word study & glossary, cumulative tests and chapter guides.

Trial and Error traces the coverage or lack thereof, of evolution in textbooks used in American public schools from the mid-1800s to the present. While the teaching of Darwinian evolution was common and not controversial in the late 19th century and into the early 20th century, the debates between evolutionists and creationists, those who argue that the Biblical theory of origins deserves equal treatment, have flared throughout the twentieth century--first in the 1920s, most famously in the Scopes trial; again in the 1960s, when the regional legislation banning the teaching of evolution was overturned, notably in Arkansas and Louisiana; and throughout the 1980s with various controversies over science textbooks, including California. Larson proposes to bring the subject up to the present through a discussion of recent trends, including the "intelligent design" movement, led by Phillip Johnson, a revised form of anti-evolutionism that gained popularity on college campuses; the impact of Michael Behe's versions of evolution; and debates over what counts as evidence for and against evolution--all of which have influenced debates over science standards, particularly at state and local levels. This new chapter will chronicle anti-evolution actions in Kansas and elsewhere and counter-actions by the National Academy of Science and other anti-creationist groups. This updated classic work presents a balanced historical interpretation of legal and educational debates over evolutionism, and will appeal to those interested in the fields of history, religion, science, and law.

America is facing a higher education bubble. Like the housing bubble, it is the product of cheap credit coupled with popular expectations of ever-increasing returns on investment, and as with housing prices, the cheap credit has caused college tuitions to vastly outpace inflation and family incomes. Now this bubble is bursting. In this Broadside, Glenn Harlan Reynolds explains the causes and effects of this bubble and the steps colleges and universities must take to ensure their survival. Many graduates are unable to secure employment sufficient to pay off their loans, which are usually not dischargeable in bankruptcy. As students become less willing to incur debt for education, colleges and universities will have to adapt to a new world of cost pressures and declining public support.
