The availability of land bases from which to launch and maintain military, diplomatic, and humanitarian relief operations is becoming increasingly uncertain because of physical or political constraints. The ability to operate from a sea base, therefore, is likely to become more and more important. The Defense Science Board recently concluded that Sea Basing will be a critical future joint military capability and that DOD should proceed to develop such capability. Following the DSB report, the Navy requested that the National Research Council (NRC) convene a workshop to assess the science and technology base, both inside and outside the Navy, for developing Sea Basing and to identify R&D for supporting future concepts. This report of the workshop includes an examination of Sea Basing operational concepts; ship and aircraft technology available to make Sea Basing work; and issues involved in creating the sea base as a joint system of systems.

Understanding gene function and regulation requires rigorous testing in live cells and organisms. Recent advances have provided a variety of new strategies for delivering

DNA and RNA into cells and probing their expression, as well as new clinical applications that rely upon the introduction of genetic material. The vast number of available techniques for clinical and laboratory research often makes selecting the optimal method a difficult process. *Gene Transfer: Delivery and Expression of DNA and RNA* provides the first comprehensive guide to technical approaches of delivering nucleic acids into cells and organisms and of ensuring (even manipulating) appropriate expression. The detailed, step-by-step protocols cover a variety of methods, both well established and newly evolving. These include viral and nonviral methods of gene delivery, as well as transgenic approaches, strategies for the regulation of transgene expression and modification of the host response. The introductory matter to each chapter includes concise technical as well as theoretical discussions with considerations for selection of the appropriate system and strategies for delivery. The Marine Environment Protection Committee (MEPC) of IMO, at its sixty-second session in July 2011, adopted the Revised MARPOL Annex V, concerning Regulations for the prevention of pollution by garbage from ships, which enters into force on 1 January 2013. The associated guidelines which assist States and industry in the implementation of MARPOL Annex V have been reviewed and updated and two Guidelines were adopted in March 2012 at MEPC's sixty-third session. The 2012 edition of this publication contains: the 2012 Guidelines for the implementation of MARPOL Annex V (resolution MEPC.219(63)); the 2012 Guidelines for the

development of garbage management plans (resolution MEPC.220(63)); and the Revised MARPOL Annex V (resolution MEPC.201(62)).

In the second edition of this popular book, Dr. White takes readers on a tour of the human immune system, explores the nature of immune disorders from cancer to HIV and presents evidence that immune messengers called transfer factors can help the body beat a wide variety of diseases for which effective treatments are lacking. In language that is easy to follow, Dr. White explains how transfer factors help the body fight viruses (herpes, hepatitis C, HPV, HIV), mycobacteria (tuberculosis), cell-wall deficient bacteria (Lyme), cancers, autoimmune diseases and other conditions. Like vaccines but safer, transfer factors can be used to immunize the public against diseases before they spread. This book is an enjoyable read about a fascinating topic. As in the first edition, Dr. White blends science, history, medicine and politics with compelling story telling and wit. Whether you are a patient, doctor, health enthusiast or just a fan of good science writing, this is one to keep on your book shelf. Bound to be

classic in the alternative medicine literature.

In today's constantly changing business environment, capable people are crucial to an organization's success, and developing their capabilities through training, learning and development initiatives is a major investment. While measuring the return on that investment is important, attempts to do so are much less valuable if they are not accompanied by a clear understanding of all of the factors that can affect the application of new skills and knowledge on the job - in other words, a clear understanding of what affects learning transfer. So, if organisations are to remain competitive, and develop the highly skilled people that will contribute to their future performance, improving learning transfer should be a priority. Cyril Kirwan's book addresses this critical issue at a number of levels. Firstly, it explores what learning transfer actually is (it's about application of learning back at work, as well as maintenance of that learning over time). Secondly, it describes the main factors that affect transfer, in terms of trainee characteristics, training design factors, and work environment characteristics. It also examines how those factors exert their effect, which ones are more important, how they interact with one another, and in doing so constructs a practical learning transfer model for practitioners. The book also describes in some detail what the various factors working for or against learning transfer look like in practice. Finally, using case studies, it points the way towards what can be done before, during and after training to improve the rate of transfer. This highly practical

book will help trainers, development specialists and line managers ensure that their training is about real outcomes and not just inputs.

The first edition of this book was quickly acclaimed as the new leading text worldwide on the law and practice of pollution from ships. The second edition deals with a variety of developments since then in this fast-moving subject: the Erika and the Prestige; changes in international law on maritime safety and compensation; latest decisions on claims for compensation; analysis of the SCOPIC regime; new material on ports of refuge, transboundary movements, and pollution from offshore craft; latest cases and regulatory changes in the US; and enlarged chapters on enforcement of laws and criminal sanctions. Like its predecessor, the second edition is superbly indexed and written clearly with the needs in mind of a wide international readership.

This edition of Importing Into the United States contains material pursuant to the Trade Act of 2002 and the Customs Modernization Act, commonly referred to as the Mod Act. Importing Into the United States provides wide-ranging information about the importing process and import requirements. We have made every effort to include essential requirements, but it is not possible for a book this size to cover all import laws and regulations. Also, this publication does not supersede or modify any provision of those laws and regulations. Legislative and administrative changes are always under

consideration and can occur at any time. Quota limitations on commodities are also subject to change. Therefore, reliance solely on the information in this book may not meet the "reasonable care" standard required of importers.

"It is a pleasure to have a full length treatise on this most important topic, and may this focus on transfer become much more debated, taught, and valued in our schools." - John Hattie

The book brings together research, theory, practical applications, programmatic illustrations, case studies, encouragement, and inspiration, and is supplemented by an online compendium for continual updates of resources, case studies, and new developments in the world of transfer. Based on a totally different way of thinking about, understanding, and acting to increase transfer student success, *The Transfer Experience* goes far beyond the traditional, limited view of transfer as a technical process simply about articulating credits, a stage of student development, or a novel enrollment management strategy. Rather, the book introduces a stimulating array of new perspectives, resources, options, models,

and recommendations for addressing the many needs of this huge cohort – making the academic, civic, and social justice cases for improving transfer at both transfer-sending and transfer-receiving institutions.

The importance of international maritime labour law - both as a component of international maritime law, and in socio-political and economic terms - has been recognised by the IMO International Maritime Law Institute for a number of years. Indeed, the Institute has annually organised a course on maritime labour law with the participation of inter alia the International Maritime Organization, the International Labour Organization, the International Transport Workers' Federation, and the German Shipowners' Association. It was therefore a great pleasure when the authors invited me to introduce their forthcoming monograph on *Maritime Work Law Fundamentals: Responsible Shipowners Reliable Seafarers*. As the title suggests, a fundamental challenge of this branch of international maritime law is to achieve a balance between the interests of the two main stakeholders. Institutionally, the effort to achieve this balance dates back a number of decades with its genesis mainly found in the work of the International Labour Organization. It has to be said that whilst this effort achieved great progress, it has led to a haphazard, plethora of legal instruments.

The *Oxford Handbook of Maritime Archaeology* is a comprehensive survey of the

field at a time when maritime archaeology has established itself as a mature branch of archaeology. This volume draws on the expertise of nearly fifty international scholars who examine the many distinct and universal aspects of the discipline.
