A guide to making music a part of a children's story hour provides lesson plans that mix picture books with songs, an annotated bibliography, and a discography. This book presents the life and personality, the scientific and philosophical work of Ludwig Boltzmann, one of the great scientists who marked the passage from 19th- to 20th-Century physics. His rich and tragic life, ending by suicide at the age of 62, is described in detail. A substantial part of the book is devoted to discussing his scientific and philosophical ideas and placing them in the context of the second half of the 19th century. The fact that Boltzmann was the man who did most to establish that there is a microscopic, atomic structure underlying macroscopic bodies is documented, as is Boltzmann's influence on modern physics, especially through the work of Planck on light quanta and of Einstein on Brownian motion. Boltzmann was the centre of a scientific upheaval, and he has been proved right on many crucial issues. He anticipated Kuhn's theory of scientific revolutions and proposed a theory of knowledge based on Darwin. His basic results, when properly understood, can also be stated as mathematical theorems. Some of these have been proved: others are still at the level of likely but unproven conjectures. The main text of this biography is written almost

entirely without equations. Mathematical appendices deepen knowledge of some technical aspects of the subject.

Glee actress Jane Lynch takes a look at bullying head-on in her first picture book. Marlene is the self-appointed queen of the playground, the sidewalk, and the school. She is small but mighty . . . intimidating! Known for her cruel ways, the little Queen of Mean has kids cowering in fear—until big Freddy stands up to her and says what everyone has been too fearful to say. In Seussian rhyme, actress Jane Lynch, clinical psychologist Lara Embry, and former children's book editor A. E. Mikesell gently and comically depict the undoing of a bully and her efforts to reform. Tricia Tusa's charming illustrations make the story an even more accessible conversation starter for all ages.

Experts in child psychology and pedagogy concur that how children are schooled today seriously conflicts with how they learn and develop. Children are being left behind and the promises and possibilities of childhood are slipping away. This book aims to disclose a deeper understanding of music's importance in children's lives and their need to know, explore, wonder, and play. Directed toward music teachers, teacher educators, and scholars, this text invites inquiries and provides insights into

contemporary challenges to learning and teaching in an era of standardization. A compendium of essays, classroom voices and vignettes is supported by relevant research in music education and companion disciplines in psychology, philosophy, and sociology. Storytelling with scholarship contributes authenticity and strengthens the premise of this book.

How hard is it to move 5 legless pianos 39 times? Beethoven owned five legless pianos and composed great works on the floor. His first apartment was in the center of Vienna's theater district... but he forgot to pay rent, so he had to move. (And it's very hard to move a piano. Even harder to move five). Beethoven's next apartment was in a dangerous part of town... so he moved, and the pianos followed on a series of pulleys. Then came an apartment with a view of the Danube (but he made too much noise and the neighbors complained), followed by an attic apartment (where he made even MORE of a rukus), and so Beethoven moved again and

again. Each time, pianos were bought, left behind, transported on pulleys, slides, and by movers, all so that gifted Beethoven could compose great works of music for the world. This compilation contains the most interesting, evocative, and amusing sections of letters, diaries, memoirs, etc., describing Beethoven's accomplishments as well as his strange personality. Traits and characteristics of the great composer are described by his contemporaries, including musical giants Rossini, Weber, and Liszt, and poets Goethe and Grillparzer, as well as other acquaintances. 16 portraits of Beethoven are included. In every major city in the world there is a housing crisis. How did this happen and what can we do about it? Everyone needs and deserves housing. But today our homes are being transformed into commodities, making the inequalities of the city ever more acute. Profit has become more important than social need. The poor are forced to pay more for worse housing. Communities are faced with the violence of displacement and

gentrification. And the benefits of decent housing are only available for those who can afford it. In *Defense of Housing* is the definitive statement on this crisis from leading urban planner Peter Marcuse and sociologist David Madden. They look at the causes and consequences of the housing problem and detail the need for progressive alternatives. The housing crisis cannot be solved by minor policy shifts, they argue. Rather, the housing crisis has deep political and economic roots—and therefore requires a radical response.

A moving biography of the late Leonard Nimoy, the iconic Spock from Star Trek, whose story exemplifies the American experience and the power of pursuing your dreams. "A wonderful new biography of Nimoy for children, and [...] one of the most unapologetically Jewish profiles for kids in ages. It made me cry."—Tablet Magazine Once there was a boy named Leonard who loved to sing and to act. His parents were immigrants who felt like aliens in America, and certainly didn't understand Leonard's drive to perform. "Learn to play the accordion," his father told him. "Actors starve, but at least musicians can eke out a living." But Leonard reached for the stars . . . and caught them. He moved to Hollywood, where he took acting lessons, and drove a taxi and took every role he could get. He worked hard, learned his lines, showed up on time, and studied his craft. Until one day he was offered the role of an alien science officer on a new TV show called Star Trek. Leonard knew what it felt like to be an

alien. But did he want the role? Fascinating is the story of how one boy followed his dreams to become one of the most beloved figures of our time. "In Leonard's profound absence—it is so lucky that his dear friend Richard Michelson has thought to bring us this richly illustrated account of his inspiring life. Together with Edel Rodriguez they beautifully capture some of the highlights of Leonard's journey from immigrants' son in Boston's west end—to one of the most iconic and recognizable characters in the world."—Zachary Quinto
