Building Digital Culture aims to answer a simple question: How can organisations succeed when the environment they operate in is changing so quickly? The last thing businesses need today is a digital strategy. Instead, their strategy needs to be fit for our fast-changing digital world, where businesses have more data than they know what to do with, a media landscape that's exploded in size and complexity, the risk of a new disruption around every corner, and only one certainty: that this change won't let up. Building Digital Culture doesn't address whether or not you should advertise on Facebook or invest in virtual reality. It doesn't seek to unearth a silver bullet to make digital investments a sure-thing. It steps back from the hype, and argues that whatever digital might mean for your business, if you don't create a digital culture you'll most likely fail, or at least fall short of what you want to achieve.

Daniel Rowles and Thomas Brown combine more than 30 years of experience at the forefront of marketing and digital developments to help you to navigate from being a business that tolerates or acts digital, to one that truly is digital. Building Digital Culture is based on more than 200 hours of research, candid interviews and contributions from senior leaders at a diverse range of brands including Twitter, Made.com, Deloitte, HSBC, Ladbrokes, Direct Line Group, Barclays, The Metropolitan Police, RSA Insurance and many more.

This definitive, authoritative clinical manual stands alone in the field of patient sedation. Combining essential theory with technical instruction, it presents "everything in a nutshell" for the practicing professional and student of dentistry. Key factors such as the physical, emotional, and mental condition of the patient - as well as required ADA guidelines - are incorporated into sedation techniques designed to improve the patient's overall dental experience. The result is an indispensable book, expert in its professional protocols and techniques, and comprehensive in its wide-ranging considerations. Detailed chapters, divided into eight parts, are devoted to topics on: the problem of fear and anxiety in dentistry; pain and anxiety control; pharmacosedation; history and techniques of general anesthesia; inhalation and intravenous sedation, preparation and management of emergencies in the dental office; and sedation for special needs patients - pediatric, geriatric, and medical and physically compromised patients. Written by an acknowledged expert in the field, the book draws on a wealth of clinical experience and ability. Combines all aspects of sedation with essential theoretical and technical instruction. Techniques are divided into sections on pharmacology, armamentarium, and technique and complications - described in explicit detail that allows it to be used as a chairside reference.
